## OPERATING PRINCIPLE

### Piezoresistif sensor

Piezoresistif sensor is a diaphragm formed on a silicone substrate, which bends with applied pressure and generates millivoltage or millicurrent proportional to the pressure applied.

### Pitot tube

Dynamic pressure is measured by Pitot tube:

**Pd = Total pressure (Pt) – static pressure (Ps)**

Velocity is calculated according to Bernoulli simplified formula.

Formula with temperature correction:

$$V_{m/s} = K \times \sqrt{\frac{574,2 \theta + 156842,77}{P_0}} \times \sqrt{\Delta P_{en Pa}}$$

Po = Barometric pressure in Pa

θ = Temperature in °C

K = Pitot tube coefficient
