## Operating principle

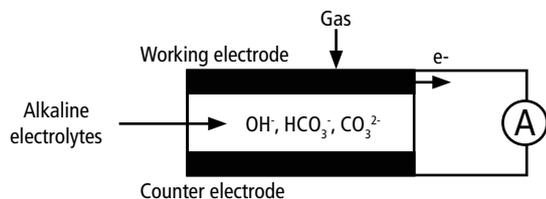

### Non dispersive infrared absorbance

A gas absorbs light at a specific wavelength, some of the intensity emitted by the infrared source absorbed by the gas sample. The amount of light read by the IR sensor is inversely proportional to CO<sub>2</sub> concentration.

### Electrochemical sensor

Electrochemical cell consists of a container, 2 electrodes, connection wires and an electrolyte. Carbon monoxide is oxidised at one electrode to CO<sub>2</sub> whilst oxygen is consumed at the other electrode. The current produced is proportional to CO concentration

HQ 210 instruments can also calculate and display the **WBGT index** that corresponds to an index of composite temperature used to estimate the effect of temperature, humidity and solar radiation on humans.

It is calculated from the following temperatures:

- T<sub>w</sub> = Wet-bulb temperature or natural wet temperature, measurement calculated from the relative humidity of a thermo-hygro probe;
- T<sub>g</sub> = Globe temperature, measured with a globe thermometer, or black globe thermometer, whose sensitive element is in black glass or black-smoke coated in order to run approximately as a black body to measure the solar radiation. The measurement is performed with a temperature probe placed in a black ball;
- T<sub>a</sub> = Air temperature (measured by a thermometer whose bulb is protected from the solar radiation by a screen). The temperature measurement is realised with a thermo-hygro probe;

HQ 210 instruments have the following functions for the measurement of temperature, hygrometry and air quality:

- **Air Quality probes (CO / temperature, CO<sub>2</sub> / temperature, CO<sub>2</sub> / temperature / hygrometry):**  
Audible alarm (2 setpoints), Selection of units, Hold function, minimum and maximum values
- **Thermocouple module:**  
Delta T, Alarm (lower and upper setpoints), Selection of units, Hold function, minimum and maximum values

\*All accuracies indicated in this document were stated in laboratory conditions and can be guaranteed for measurements carried out in the same conditions, or carried out with calibration compensation.

\*\*Calculated parameters.
